Serial No.: 10/534,292 Attorney Docket No.: A0848.70004US00

Abstract

The invention relates to a method suitable for administering protein therapeutic molecules orally, sublingually, topically, intravenously, subcutaneously, nasally, vaginally, rectally or by inhalation so as to avoid inactivation, by using <u>single domain antibodies</u> VHH polypeptides derived from Camelidae antibodies. The invention further relates to the said therapeutic molecules. The invention further <u>provides</u> a method for delivering therapeutic molecules to the interior of cells. The invention further relates to <u>anti-IgE</u> <u>anti-TNF-alpha</u> therapeutic molecules.
